

Phishing Analysis Lab Report

Scenario Overview

In this scenario, you are a **level 1 SOC analyst**. As the first line of defense, you have to identify phishing and spam emails reported by end users. Your objective is to carefully review each email, extract key indicators, and identify any signs of malicious activity. The findings you uncover will help your team develop detection rules to prevent similar threats from reaching other users in the future.

Email Subject: Your account is on hold

? Question 1 — Impersonated Brand

What reputable brand is this email tailored to impersonate?

 **Steps:** you can know reputable brand by check From header

Investigate the **UPDATE ACCOUNT NOW** button. What is the shortened URL?

🔍 Steps:

✓ Answer: `hxxps[:]//t[.]co/yuxfZm8KPg?amp=1` — note: URL defanged

Summary & Findings

The primary objective of this investigation is to extract critical email artifacts to ascertain the legitimacy of the analyzed email and determine whether it represents a phishing attempt. Key artifacts examined—both explicit and embedded (e.g., hidden within buttons/hyperlinks)—include the Sender Email Address, Intended Recipient, Sender IP Address, Sending Domain, and embedded URLs. Analyzing these components enables mapping the underlying malicious workflow, evaluating the intent behind user interaction, and assessing the reputation of associated IP addresses, domains, and URLs through threat intelligence
